Amazon – Global E-Commerce Intelligence Suite – Forecasting & Scenario Modelling

Report prepared and analytics conducted by Soham S. Amburle | 03 – 04 March 2026

The Forecasting & Scenario Modelling Dashboard provides forward-looking executive analytics view within a global e-commerce business model inspired by Amazon. Built using a synthetic dataset of 100,000 transaction-level records, this dashboard focuses on revenue trajectory analysis, growth projections, fulfilment cost monitoring, discount sensitivity assessment, and performance benchmarking against strategic targets.

Designed in Power BI using a structured star schema data model, the dashboard enables executive leadership, strategy teams, and commercial stakeholders to monitor growth performance and evaluate business scenarios through structured visual storytelling and interactive controls.

Through KPI cards, trend analytics, category segmentation visuals, performance gauges, and comprehensive slicer filtering, the dashboard delivers a predictive and decision-support perspective on revenue scalability and profitability sustainability.

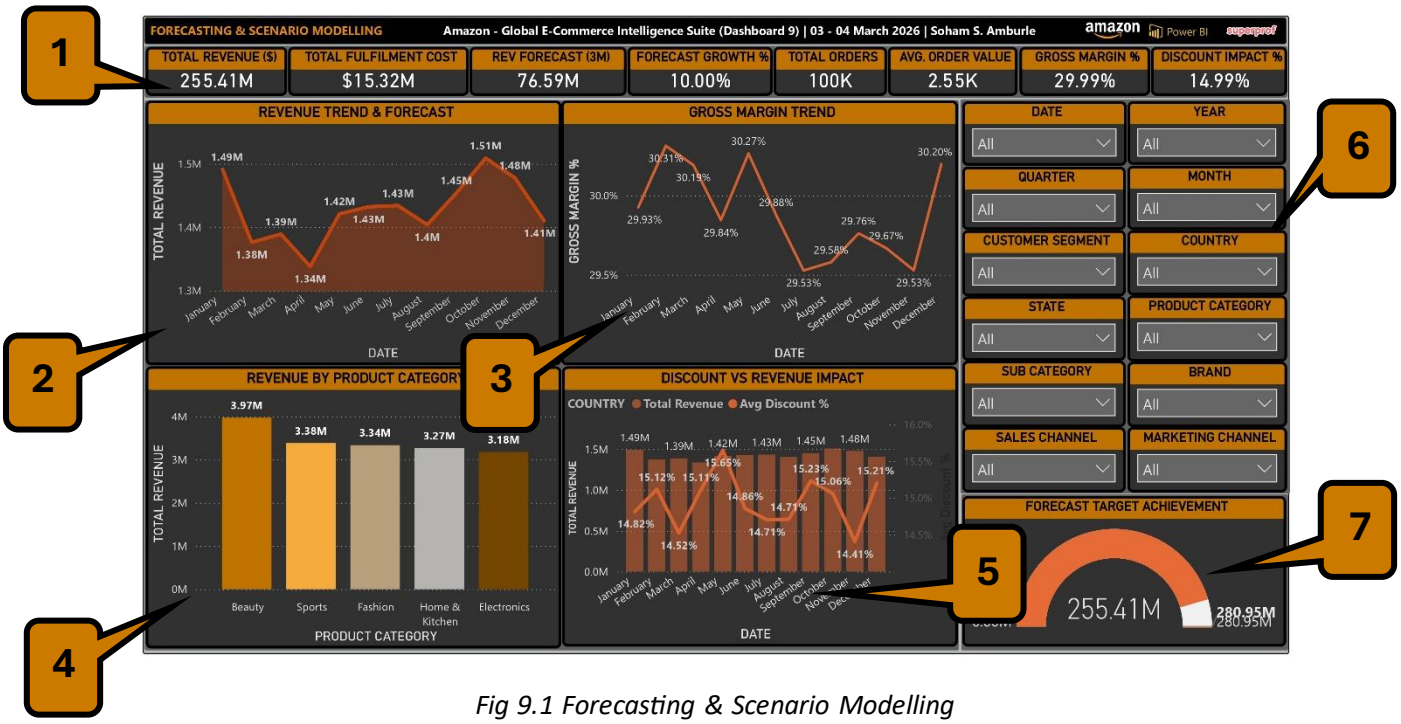

Fig 9.1 Forecasting & Scenario Modelling

Executive Storyline

The dashboard follows a structured forecasting narrative:

- Monitor revenue trajectory and growth assumptions
- Evaluate fulfilment cost scalability relative to revenue
- Assess margin stability over time
- Identify revenue concentration across product categories
- Analyze discount dependency risk
- Benchmark performance against projected growth targets

Data Disclaimer: This project uses a fully synthetic dataset of 100,000 records for demonstration and testing only; no real-world data was used.

This layered structure allows stakeholders to move from high-level growth KPIs to operational and pricing-level scenario insights.

Visuals and Description

1. KPI Cards (Executive Forecast Snapshot)

Eight KPI cards provide an immediate growth performance overview:

1. Total Revenue – Current revenue performance
2. Total Fulfilment Cost – Operational logistics cost
3. Revenue Forecast (3 Months) – Projected revenue outlook
4. Forecast Growth % – Growth assumption benchmark
5. Total Orders – Transaction volume indicator
6. Average Order Value (AOV) – Revenue per order efficiency
7. Gross Margin % – Profitability ratio
8. Average Discount % – Pricing impact indicator

These KPIs establish visibility into scale, operational efficiency, margin sustainability, and growth assumptions.

2. Revenue Trend (Area Chart)

X-Axis: Date (Continuous)

Y-Axis: Total Revenue

Displays historical revenue movement, seasonality, and overall trajectory.

3. Gross Margin Trend (Line Chart)

X-Axis: Month

Y-Axis: Gross Margin %

Tracks profitability stability and identifies potential margin compression risk.

4. Revenue by Product Category (Clustered Column Chart)

Axis: Product Category

Value: Total Revenue

Highlights revenue concentration and dependency risk across product lines.

5. Discount vs Revenue Trend (Line & Clustered Column Chart)

X-Axis: Month Name

Column Value: Total Revenue

Line Value: Average Discount %

6. Slicers (Dynamic Forecast Controls)

The dashboard includes twelve interactive slicers:

1. Order Date
2. Year

Data Disclaimer: This project uses a fully synthetic dataset of 100,000 records for demonstration and testing only; no real-world data was used.

3. Quarter
4. Month
5. Customer Segment
6. Country
7. State
8. Product Category
9. Sub Category
10. Brand
11. Sales Channel
12. Marketing Channel

All visuals dynamically respond to these filters, enabling scenario-driven and multi-dimensional forecasting analysis.

7. Forecast Target Achievement (Gauge)

Value: Total Revenue

Target: Revenue + 10% Growth

Provides a visual benchmark indicating whether performance aligns with projected growth targets.

Business Value

This dashboard enables stakeholders to:

- Monitor revenue growth and projection alignment
- Evaluate fulfilment cost scalability
- Identify margin stability and volatility
- Analyze pricing dependency through discount impact
- Understand product-level revenue concentration
- Support data-driven forecasting and strategic planning decisions

By integrating KPI monitoring, trend analysis, category segmentation, target benchmarking, and interactive filtering, the dashboard delivers a structured and enterprise-ready forecasting intelligence solution.

Tools & Data

- Visualization Tool: Power BI
- Dataset: Fully synthetic global e-commerce dataset
- Record Count: 100,000 transaction-level records
- Time Period: 2021–2024
- Model Design: Star Schema (Fact_Orders with Dimension Tables for Date, Customer, Product, and Channel)
- Purpose: Forecasting and scenario modelling analytics demonstration

Data Disclaimer: This project uses a fully synthetic dataset of 100,000 records for demonstration and testing only; no real-world data was used.
